IP FAX Brought to you by AUREON Connect

Online faxing continues to replace traditional fax machines as an easier and more efficient method for sending and receiving faxes. Hosted IP Fax is a reliable and scalable online solution. It works on any Internet or data connection and is secure and efficient. Streamline your business communications with a Hosted IP Fax solution.

EMAIL-TO-FAX / FAX-TO-EMAIL

The email inbox is typically at the core of business communications. Hosted IP Fax provides Email-to-Fax / Fax-to-Email capabilities that benefit the end user by unifying all their communications into one common email inbox. Faxes are instantly routed, which speeds up delivery and improves workflows. Email faxes are received as PDF documents, allowing them to be easily annotated, forwarded, and archived. In addition, using email for faxes leads to fewer applications to learn and support.

EMAIL-TO-FAX / FAX-TO-EMAIL KEY FEATURES

- Provides network fax services using VoIP technology.
- A dedicated fax number routing to users' email inbox.
- Send inbound faxes as PDF document attachments.
- Detailed fax notifications sent back to sender.
- Works in Microsoft Windows environments.
- Can be deployed across multiple locations.
- Easy to use and set up.
- Reliable and efficient.

FAX MACHINE ATA

While Fax-to-email is an acceptable solution for most organizations, some may still require a traditional fax machine to send and receive hard copy documents. The Hosted IP Fax analog telephone adapter (ATA) device allows you to use your existing fax machine or multi-function printer (MFP) while leveraging VoIP technology (Internet connectivity), without requiring a traditional telephone line.

FAX MACHINE ATA KEY FEATURES

- Provides network fax service using VoIP technology.
- Easy to use and set up.
- HIPAA Compliant Fax service with the use of HTTPS.
