IP TELEPHONE

Brought to you by AUREON Connect

Feature Access Codes and Descriptions

IP Telephone service includes a variety of calling features by using pre-assigned codes. The feature codes listed may not be available in all areas.

FEATURE ACCESS CODES		
Code	**Feature**	**Description**
2 – 9 20 – 49	Speed Dials	Single and two-digit numbers for speed dials, programmable through the VoicePortal.
*62	Call Forward Busy — Activate	Allows you to forward incoming calls to another destination when you are already on a call. Usage: Dial *62 followed by the destination number. You will hear a stutter tone. After which, the line will call the destination number. After the destination number answers, call forwarding is active, and you can hang up. Call Waiting must be suppressed to allow Call Forward Busy to work.
*63	Call Forward Busy — Deactivate	Stops calls from forwarding when you are already on a call.
*65	Caller ID Delivery — Activate	Enables Caller ID name and number to display on your phone when a call is ringing. (Requires a Caller ID compatible device.)
*67	Caller ID Blocking	Blocks your Caller ID from being provided to the party you are calling for a single call. Usage: Dial *67 followed by the destination number. Your phone number will not show for this call but will show on subsequent calls.
*69	Last Call Returned	Allows you to return the last incoming call.
*70	Call Waiting Suppress	Suppresses Call Waiting for a single call. Usage: Dial *70 followed by the destination number. Call Waiting will not be active for this call. Any incoming calls during this call will receive busy treatment.
*72	Call Forward Always — Activate	Allows you to forward all incoming calls to another destination. Usage: Dial *72 followed by the destination number. You will hear a stutter dial tone. After which, the line will call the destination number. After the destination number answers, call forwarding is active, and you can hang up.
*73	Call Forward Always — Deactivate	Stops all calls from forwarding.
*82	Caller ID Presentment	Allows your Caller ID to display for the party you are calling for a single call when your line is set up to withhold your Caller ID by default. Usage: Dial *82 followed by the destination number. Your phone number will show for this call but will not show on subsequent calls.
*85	Caller ID Delivery — Deactivate	Disables Caller ID name and number from displaying on your phone when a call is ringing.
*92	Call Forward No Answer — Activate	Allows you to forward unanswered incoming calls to another destination. Usage: Dial *92 followed by the destination number. You will hear a stutter tone. After which, the line will call the destination number. After the destination number answers, call forwarding is active, and you can hang up. Call Waiting must be suppressed to allow Call Forward No Answer to work.
*93	Call Forward No Answer — Deactivate	Stops calls from forwarding when they do not get answered.
*123	Voicemail	Allows you to access your Voicemail box.
